Health Wyze Colloidal Copper Lotion

Price: \$19.95

Why This Product is Better and How This Unique Lotion Might Benefit You

- This truly natural product does not contain peptide contaminants, chemical impurities, or anything else that is unnatural. Most ingredients are food based.
- Unlike other formulations of copper lotions, this product is water based, is free of impurities, uses food-based ingredients, is pH balanced to 6.0 (gentle on skin), and it uses the appropriate ratio of vitamin C to copper to yield the best results.
- Copper is reported to have anti-aging properties, at least cosmetically. Many of our happiest customers use it facially for this reason.
- Copper rejuvenates at a deep level, because it helps a body to produce new blood vessels whenever there is circulatory impairment.
- Zinc is used by the body to maintain healthy skin, hair, and nails, but zinc is more-or-less useless to a body without copper.
- Copper both tightens the skin and helps to improve its elasticity at the same time. This is a unique property of copper.
- Copper helps to heal damaged joints and it decreases the pain of joint injuries.
- This lotion is entirely water based, so it sinks in completely with no oily residue whatsoever. It just disappears.
- The ingredients of this lotion promote rapid healing of the skin, joints, and tendons. Some customers even call it a "steroid".
- The copper is entirely extracted using electrolysis (combining metal with water using electricity) for the sake of maximum quality and purity.
- No chemicals ever come into contact with the lotion, unless we count the citric acid that is used as a preservative.
- The copper concentration within our product is extreme, which makes it beneficial for external use. The absolute minimum is 600 P.P.M. of copper.
- The ingredients of this lotion are so safe that we developed it inside of our own kitchen, and we were not even wearing hazardous materials suits.

- Finally, there simply is nothing else like this in the world.

Product History and Description

A friend came to us with severely damaged skin on his hands, which had been brought about by his repeated exposure to harsh industrial detergents. The situation was so bad that his hands were regularly cracking open, and infectious boils sometimes resulted. We made it our mission to help him using safe and natural ingredients, but there were no such products on the market. We endeavored to help him in avoiding the standard steroid treadmill, which would have endangered his long-term health, and it would have only temporarily suppressed the symptoms. Working with a dermatologist would have furthermore caused a major financial hardship. Most importantly, we wanted to heal his hands, instead of just making them temporarily feel better with typical symptom treatments that would have eventually made his situation worse. This is what most lotions do.

Practically all of our research into severe skin problems pointed us toward a single direction: copper. Studies prove that copper is useful in increasing skin elasticity (increasing elastin), producing ideal skin thickness, and for stimulating collagen production. Copper seems to have miraculous properties upon human skin. Copper is to the skin what vitamin C is to the overall immune system. It is essentially a supplement for the skin. This is why an extremely concentrated, pH-corrected, copper solution in both colloidal and hydroxide forms was chosen as the core of our lotion. Our formulation contains large particles of copper, in addition to having colloidal particles. Both small and tiny particle copper solutions have their own sets of benefits and degrees of penetration. Evidence shows that therapeutic solutions containing large metallic particles (like copper hydroxide) are the most effective for correcting skin and tissue issues, but smaller particles have deeper penetration. We use both to get both sets of benefits. The large particle phenomena is similar to the situation wherein larger particle silver compounds are more effective for burn treatments.

Unlike steroid solutions, our lotion is not dangerous. It dramatically heals skin and some joint injuries using copper, alongside food-based ingredients. Our lotion causes much of the dead and severely damaged skin to flake off painlessly; especially when it is first used. It absorbs rapidly, and it leaves no oily residue. The lotion is water-based; using mostly food-based ingredients. It typically leaves the skin feeling baby-soft, and it is known for causing a brief warming and tingling sensation. In fact, it is designed to work like a liquid capacitor. Its electrical properties are not fully understood, but its unusual capacitance is demonstrated by the fact that its electrical resistance actually increases with the addition of more copper. Therefore,

we are being quite literal when we suggest that the lotion will charge your skin.

Natural products are often believed to be significantly less effective than their chemical and medical industry counterparts, but this lotion proves otherwise.

The Ingredients

- Distilled water
- Colloidal copper and copper hydroxide*
- Citric acid
- Vitamin C
- Guar gum
- Xanthan Gum
- Sodium bicarbonate (baking soda)
- Chalk

* The term "hydroxide" merely means something dissolved inside water containing sodium. Industrial copper hydroxide is dangerous because it is not pH balanced, it is made with dangerous chemicals, and it usually has harmful impurities. Our manufacturing process uses only electricity to combine 99.99% pure copper with distilled water and a small amount of baking soda. We use electricity to generate the copper solution instead of chemicals, for the sake of safety and purity.

Our Skin Care Recommendations for Severely Damaged Skin

- People with extreme skin problems should stay away from direct contact with latex. This includes latex in foods (avocado, bananas, chestnuts, kiwi, and perhaps even tomatoes). Many people have latex allergies because of vaccinations. Latex allergies can have terrible effects on the skin.
- Topical use of colloidal copper. Copper is important to the synthesis of both collagen and elastin. It has also been shown to increase the thickness of the skin. For a safe oral method of supplementing with copper, we suggest chlorophyll. Otherwise, do not ingest copper because it is dangerous unless it is naturally occurring in foods.
- The benefits of coconut oil seem limitless, and it is extremely useful for dry skin. Orally take a teaspoon or so daily. Buy only organic, cold-pressed coconut oil from a health food store. It is not expensive, and it will help.
- Vitamin C increases collagen and elastin. It is commonly used for the treatment of dry skin.
- Since unhealthy fats disrupt collagen production, there is part of the Budwig Protocol which should be helpful. Purchase flax seed oil capsules and mix the extracted oil with

goat cheese. Yogurt can be used instead of goat cheese, but it is not as healthy, because it is usually made with homogenized milk. Make sure the flax seed oil is in dark capsules in a dark container. The oil can quickly become dangerously rancid when it is exposed to heat and light. Do not mix with a metal object. Wood is ideal.

- Get liquid iodine and place about a 2 inch (5 cm.) patch on your skin. Let it sink in throughout the day. Your body will absorb only the amount that it needs. Always avoid povidone iodine. Read the iodine article for safety information concerning the oral supplementation of iodine.
- You may have pre-diabetes. Check yourself and treat accordingly after reading our diabetes article.
- Try supplementing with niacin at a small dosage, but please read the our article concerning niacin's strange side effects.
- Zinc supplementation is known to help with a variety of skin, hair, and nail problems. A body cannot properly utilize zinc without copper.
- You may have hypothyroidism if you have severe or chronic skin problems.
- Sunbathing is a helpful treatment for many skin diseases, such as athlete's foot fungus, psoriasis, acne, boils, and impetigo. Sunlight converts cholesterol in the skin into vitamin D-2 to help the liver.

Conditions and Treatments

The lotion helps with joint pain and joint injuries. It promotes the rapid healing of extremely damaged skin and tendons. We are not allowed to make specific public comments about its true effectiveness in treating a variety of skin and joint diseases, such as psoriasis; due to F.D.A. censorship restrictions. It is illegal for us to make any "unapproved claims" that threaten the cozy pharmaceutical cartel manufacturing steroids and other medical treatments. For example, we could not tell you if our lotion helps with arthritis, if it in fact does actually help with arthritis, any more than we could make other unapproved claims involving skin diseases, such as psoriasis. You must discover these things for yourself, or learn about the facts from others. We really wish that there was freedom of speech in the health market, and that we could legally tell you the whole truth about our lotion. We invite you to do your own research about the many benefits of transdermal copper, and contact us if you need help finding credible scientific information (like studies from the National Institutes of Health). You are allowed to make whatever comments you wish to about our lotion, because you neither sell it nor manufacture it. So, please feel free to talk about it!

What Not To Expect

Virtually all commercial hand lotions are full of toxic chemical additives or oils that smother the skin. Therefore, most lotions actually damage skin in the long term. Many of the chemicals in other lotion products are known to accumulate inside the body. They usually accumulate inside the liver, and they are difficult to eliminate. Most commercial lotions merely mask skin

dryness by covering the skin in an oily layer of petroleum-based chemicals, which eventually makes skin health (and overall health) worse. Some lotions even contain plasticizing agents, which are toxic epoxy compounds. Even in the case of lotions which only use natural oils, such as Shea butter, the skin is still being smothered in oils, and nothing is actually being done to remedy the underlying problems. Most lotions sold in retail locations are designed by the chemical industry to be good for perpetual business, by being bad for our health, and they are made intentionally toxic enough for a long shelf life.

Keep All Copper Solutions Out of Your Mouth and Away From Children

The Health Wyze Colloidal Copper Lotion is for external use only, and it should be kept away from children who might put it into their mouths.

Additionally, we discourage people from internally consuming copper supplements. Copper quickly becomes toxic whenever more of it is orally consumed than is needed, and it is reported to cause severe organ damage; especially to the kidneys and liver. This is doubly true for solutions such as ours, which are not purely colloidal, but which contain larger copper particles. With a healthy diet (especially an organic one), a person should already have plenty of dietary copper. The dangerously irresponsible industry of copper dietary supplements is one of many which we hope to someday drive from alternative medicine.

Health Wyze Antiperspirant

Price: \$12.00

Why You Should Choose The Health Wyze Antiperspirant

We are honest about what our antiperspirant product contains, and we are honest about how it works. As you read more, you will come to realize how rare this is. Our antiperspirant is as natural as any effective antiperspirant could be. The vast majority of the products that are currently available are dangerous chemical cocktails, despite the frequently dishonest product claims. The phrase "natural" has been intentionally left unregulated, so products containing chemicals may be falsely labeled as being natural. The same happens with dishonest food labeling. Our product is the world's only safe antiperspirant.

Why Other Antiperspirants Should Be Avoided

There is an array of terrible ingredients that are present in most hygiene products. The worst ingredient plaguing most antiperspirants is aluminum. We have reported the dangers of aluminum in our main articles and audio shows, for it is so damaging to the health that even aluminum cookware should be avoided. It has been repeatedly verified as a cause of breast cancer, Alzheimer's disease, brittle bones, autism, infertility, and permanent damage to the central nervous system. Furthermore, aluminum mimics estrogen to imbalance the hormones; leading to hypothyroidism, endometriosis, decreased fertility, and virtually every ailment that targets women. Underarm products are one of the greatest causes of breast cancer, due to the fact that aluminum is absorbed almost directly into the lymph nodes from the armpits. Potassium aluminum sulfate makes up 25% of some products, and it cannot be excreted from the body without intervention. It accumulates within the body in ever-increasing amounts throughout a person's lifetime, so that the aluminum becomes substantially more disease inflicting with increased age. This includes cognitive dysfunction.

Aluminum kills the bacteria that is responsible for foul odors, so it is used specifically *because of its toxicity*, not in spite of it. It has never been necessary. A non-toxic (to humans) option could easily be used in place of aluminum, such as silver or copper. Our antiperspirant utilizes copper. It provides some benefits to health, and it is actually a trace nutrient. Such safer alternatives have always existed for manufacturers.

Another reason for the industry's use of aluminum is because its molecules sink into the skin to create such toxicity that the sweat glands can no longer function. It is unknown exactly how it happens, and perhaps this outlines the problem further. Various hypotheses exist to explain

aluminum's ability to stop sweat production, and many of them are ridiculous. Copper will more-or-less yield the same result, in a completely non-harmful manner. We believe that it is due to the electrical properties of copper.

The makers of the toxic antiperspirants have attempted to justify their behavior by claiming that the particles of aluminum in potassium alum are so large that they cannot be absorbed into the body. Yet the particles of aluminum in potassium alum are typically so microscopic that they produce a completely transparent solution when mixed into clear fluids. The particles are so small that they cannot even produce a color change with all but the most complete saturation, which actually proves that they are small enough to have deep penetration. In fact, the science shows that aluminum only works to stop perspiration when it sinks deeply into the cells. It means that those "natural" antiperspirants could do nothing if they did not contain truly toxic aluminum that is absorbed deeply into the body. Therefore, we are being poisoned on a daily basis by companies that know the truth.

Most antiperspirants contain parabens. These are plasticizing chemicals that cause hormonal disruptions. Parabens are never clearly labeled. Synthetic fragrances are also common additives. Such 'fragrances' are largely unregulated chemicals, and they are used instead of their natural equivalents (essential oils) because they are cheaper. They are well known for aggravating inflammatory lung conditions, such as asthma; though the effects of transdermal absorption remain unstudied. The chemicals in deodorants and antiperspirants sink through the armpits, accumulating in the breast tissues and lymphatic system, making cancers significantly more likely, while impairing the overall immune system.

A Typical "Natural" Antiperspirant from Tom's of Maine

Ingredients: Aluminum Chlorohydrate, Palm Kernel Oil, Natural Fragrance, Stearyl Alcohol, Hydrogenated Castor Oil, Hydrogenated Soybean Oil, Talc, Dicaprylyl Ether, Olive Leaf Extract, Maltodextrin

Aluminum is the main ingredient. It is followed by hydrogenated oils. These carcinogenic oils are infamously known as trans fats. Talc is a carcinogen, even when applied topically. It is for this reason that "talcum powder", which was once used on infants, has been banned in children's products for over a decade. The soybean oil almost certainly originates from genetically engineered soy, and it contains phytoestrogens, which attack female hormones to cause a variety of diseases in women. Phytoestrogens also cause men to develop "man boobs". The inclusion of olive leaf extract appears to be little more than a marketing ploy to hook the health conscious, because it is ineffective at reducing bacteria, odors, or perspiration. For the sake of brevity, we shall not analyze each ingredient, but they are very far from natural.

A More Typical Antiperspirant from Degree

Ingredients: Aluminum Zirconium Tetrachlorohydrate, Cyclopentasiloxane, PPG-14 Butyl Ether, Stearyl Alcohol, Hydrogenated Castor Oil, Peg-8 Distearate, Talc, Fragrance, BHT, Zea Mays (Corn) Starch.

Observant readers will notice that there is a surprising amount of similarity between the alleged 'natural' product, and the one that does not have such claims. In addition to having the more toxic ingredients from Tom's of Maine Antiperspirant, the Degree product also contains cyclopentasiloxane, an industrial solvent, and Peg-8 Distearate, which is a petroleum-based carcinogen. The cyclopentasiloxane is actually meant to help the aluminum penetrate deeper into the body.

The Industry's Lies

Other companies lie about their ingredients. The most common lie is when antiperspirant companies state that their products are aluminum-free, or they imply such by stating that the given products are "aluminum chlorohydrate-free", when aluminum clearly exists in their ingredient lists. They sometimes take advantage of their customers' lack of chemistry knowledge by deceptively hiding aluminum with terms like potassium alum, mineral salts, volcanic minerals, and alum. Companies also lie by claiming that their products are natural, when in fact, their products contain harmful chemicals that are never seen in the natural world. Brands which are actually aluminum-free usually contain other questionable ingredients, such as propylene glycol. Some of the companies are so flagrantly shameless that they have actually featured the Komen Foundation's pink ribbon on their aluminum containing, breast cancer-causing products, and one of those companies (Naturally Fresh) made threats against our organization concerning our reporting of their shenanigans.

Our Ingredients

- Colloidal copper / copper hydroxide
- Astragalus
- Witch hazel
- Rubbing alcohol (isopropyl)
- Vitamin C (ascorbic acid)
- Baking soda (sodium bicarbonate)
- Xanthan gum
- Chalk (calcium carbonate)
- Lemon essential oil

As always, we proudly showcase our ingredients. There is no fine print for our products, nor do we hide chemicals under generic names like "fragrance". The Health Wyze Antiperspirant is as safe and natural as we could possibly make an effective antiperspirant. The type of plastic used for the container is HDPE (#2). This is the safest plastic known. It is not known to leach chemicals, and this type of plastic is so non-reactive that it is used for storing chemicals that normally cannot be stored inside plastics. It may look and feel like any other plastic, but it is chemically more like glass.

The Naturalness of Our Product and Its Labeling

We confess that we are now uncertain if we would still use the phrase "All Natural" on our labels if we had to print them again. Most companies would have no qualms about using such labeling in regard to our set of ingredients, but it really is open for debate as to whether the isopropyl (rubbing) alcohol should be considered natural, for it was chemically synthesized. We would choose the better and safer ethyl alcohol (e.g. vodka) if we were legally allowed to. Regardless, the labels must remain exactly as they are for some time, because the bottom line is that the labels would be expensive for our small, not-for-profit organization to reprint. We believe that we have exerted more of a good faith effort to do everything right than anyone else has, and we believe that we succeeded in creating the safest antiperspirant that has ever been made. The big picture is that it is the closest thing in existence to a completely natural antiperspirant that is actually effective. We spent time finding the most trustworthy suppliers for our ingredients and did it well. All of the ingredients come from the U.S.A., as best as we could determine, with the exception of astragalus, which only grows in its native country of China. It, like the other ingredients, seems to be absolutely pure. We shall probably tweak our labeling in the future to remove ambiguities.

How It Works

Astragalus and witch hazel are astringents, which means that they cause the pores to contract, and thereby reduce sweating. We discovered the little-known benefits of astragalus while researching natural treatments for staph infections. Upon examining Traditional Chinese Medicine, we learned of astragalus' benefits to the lymphatic system, and its use as an astringent. In other words, it does the opposite of aluminum -- strengthening the lymph nodes instead of crippling them. Alcohol initially kills the odor-causing bacteria, it helps the antiperspirant to penetrate through the oils of the skin, and it helps to preserve the antiperspirant itself. Chalk is added because it is somewhat drying, so it helps with the antiperspirant action in a similar, but safer manner than talc. Xanthan gum is added to thicken the liquid, so that it does not leak from the roll-on container. Lemon essential oil (made from cold-pressed lemon peels) is added to provide a fresh, clean scent. The colloidal copper works similar to the manner in which aluminum works in traditional antiperspirants. However, unlike aluminum, the copper is non-toxic. We have always used colloidal copper for our lotion product, because it is anti-microbial, and because it has profound benefits to the skin. It thusly seemed to be a perfect ingredient for the antiperspirant.

How Well It Works

We believe that the sweat reduction obtained from our product works about as well as mainstream commercial products, and its combined deodorant-like properties make it very effective at preventing odor. Too often, using safe products means making sacrifices. Our antiperspirant proves that it is not always necessary. Unlike competing products, it does not leave behind an oily or waxy residue. Many people will not realize that it is working for several days, because then they will finally realize that they had not noticed anything. It virtually disappears and does the job. Although, there may be a slight lemony scent that is noticed from

time to time. The scent is like lemon-flavored Starburst candy. Of course, results may vary.

Common Questions and Answers

How do I use it?

The Health Wyze Antiperspirant is very easy to use, and it comes in a convenient roll-on container. Simply use it as you would use any other antiperspirant. We recommend shaking the product vigorously just before use, to cause it to become thinner. It should then stay thin for a couple of minutes.

Do you offer refunds for this product?

This item is not eligible for returns and refunds. However, we will re-send the item if it is not delivered.

Health Wyze Dental Cleanser

Price: \$11.20

We have had significantly more requests to provide a better dental cleanser than anything else at Health Wyze Media. We have averaged a request about every two weeks for the last eight years. It has added up to quite a stack of messages. We understood why, when considering the other options in the market. Every dental cleaner for consumers that we had seen was atrocious. Throughout the history of Health Wyze, we have been absolutely outraged by the sorry state of the consumer dental market, but we were unable to do anything about it. We spent the last three years studying the work of Dr. Weston Price, and doing our own independent research to seek something better, and most importantly, safer. We failed for the entirety of those three years. Not only were we unable to find an acceptable set of natural ingredients, but there was the greater problem of bacteria, which would poisonously contaminate any truly natural toothpaste, since a toothpaste is a semi-liquid. This fact should give readers a reason to pause and consider that every existing toothpaste must be made toxic for the sake of neutralizing bacteria, for the mouth has the greatest concentration of bacteria within the human body. This means that all of the "natural" toothpastes are a lie, for it is not possible to make a truly natural toothpaste that is safe from bacteria colonies. There are no exceptions. For many years, we used Nature's Gate toothpaste, and we recommended it to our closest friends as the least of evils, but it was never because we were impressed with it.

Most health-conscious people already know about the horrendous problems with fluoride toothpastes, such as the fluoride-induced cancers and infertility. One great irony is how communities suddenly get huge spikes in the number of cavities whenever water fluoridation is implemented, which means that officials have been dishonest for decades about why fluoride is contaminating the water supplies of most U.S. communities.

The so-called "natural" tooth products are nearly as bad as the fluoridated products are, and health-conscious people usually have no idea just how bad these products are. Our biggest competitors in the better and more natural toothpaste category are the offerings from Tom's of Maine. Inside their 'natural' toothpastes is sodium laurel sulfate. Where does this organic ingredient grow? It comes from a factory where ethylene oxide and sulfuric acid are combined. This 'natural' ingredient is used as an industrial degreaser, and it is reported to be carcinogenic. When it breaks down, it releases another chemical, 1,4-dioxane. It has been repeatedly shown to cause cancers in animal studies. 1,4-dioxane is also known for causing kidney, liver, and nervous system damage. Likewise the titanium dioxide that is also included in their 'natural' products causes cancers too. Another example is how some of the allegedly 'natural' toothpastes

contain sodium cocoyl glutamate as a foaming agent. This chemical is made mostly of glutamic acid, which is the toxic compound of monosodium glutamate (MSG). Sodium cocoyl glutamate is essentially a variant of MSG that allows companies to hide it in plain sight with dishonest labeling. It is truly tragic that so many people who are paying extra for safer toothpastes are actually getting something that lowers their intelligence and puts them at a much greater risk of heart attacks. This form of glutamic acid is about as natural as high fructose corn syrup, and the putrid yeast used to free the glutamic acid is genetically engineered. We could go on endlessly about such despicable ingredients, and the dishonesty from the companies that produce natural toothpastes. We are frankly amazed that nobody has instituted a class-action lawsuit concerning such 'natural' products. This sort of behavior is perfectly normal within the dental industry, and Tom's is definitely not the worst offender.

Earth Paste is probably going to be a big competitor of our product, because it is significantly more natural than the other competing products. As with all of the others, we nevertheless considered it to be wholly unacceptable. Earth Paste has clay as its main ingredient: literally a type of sand. That sounds safe and natural enough, but after years of use, the sanding of the teeth will take a toll upon the enamel. Another consideration is how the mineral constituents of such products do not match what is ideal for dental health in any way. The random composition of minerals that is found inside of clay may actually be counterproductive to dental health, and there is also an elevated risk of contaminants from any ingredient that is dug from river beds. To summarize, it is patently dumb to brush with dirt that has been dug from river muck, in our opinion.

The Epiphany

In the early part of June in 2015, we found ourselves feeling beaten. Three years of searching for something better had yielded nothing. There were the problems with moisture and bacteria, combined with an inability to provide the right minerals in a safe and organic way. Even the use of baking soda was not an option; due to its lack of benefit, and its abrasive qualities. In our depressed stupor, we stared at the many pages of data before us, and we asked our boss for help. Some of you know of him as God. Within a couple of hours, we recalled some things of great significance that had been forgotten. We remembered the world's first (and all-natural) antibiotic: myrrh resin. It was the favorite medicine of Hippocrates, who is known as the Father of Medicine. Myrrh was also one of the treasures that was given to baby Jesus by visiting wise men. This completely natural ingredient can clean and somewhat sterilize the mouth, then keep it feeling fresh for about a day. However, that was not the end of our epiphany. We next realized that we would not actually need to obtain our main ingredient for tooth remineralization from the chemical industry. Namely, this was monocalcium phosphate. We could get a better mineral spread and a more natural ratio by using powdered milk, which is what the human body already uses to build bones and teeth. The final epiphany was that we should not make a toothpaste, but instead create an old-fashioned tooth powder. This would make the minerals more concentrated and help to keep the product sterile. Keeping it dehydrated eliminates bacteria and the subsequent need to create a toxic product.

Usage Instructions

- If at all possible, get some pure or spring water for dampening the toothbrush and for rinsing after finishing. Chlorine and fluoride from tap water will neutralize the beneficial effects of this product.
- Dampen the toothbrush, but shake out the excess water. The brush should be damp but not wet.
- Gently tap the bristles of the toothbrush against the powdered cleanser, so that some of the product attaches to the brush.
- Brush the teeth as is normal.
- Be sure not to get water droplets inside the powder and keep the container closed between brushings.

Ingredients

- Powdered Milk -- This ingredient was chosen for its blend of calcium and phosphorous, and it contains many other bioavailable nutrients for aiding teeth and bones. Dr. Price had discovered that dietary butter is the fastest way to remineralize the teeth (repair cavities). Butter is a type of nutritionally-concentrated milk, and so is powdered milk.
- Myrrh -- This is a completely safe and natural antibiotic that has cleaning properties without soap-like qualities. It makes the mouth feel good with a slight numbing effect. It will likely remind you of the professional dental cleansers and polishes to the degree that you will wonder if your dentist uses it. We strongly suspect that it is indeed one of the secret ingredients inside professional dental formulations.
- Magnesium Citrate -- This was chosen because the human body uses magnesium, calcium, and vitamin D together. Without magnesium, the calcium would be much less likely to bond with the teeth, or to be usable by the rest of the body. The "citrate" part comes from mixing the magnesium with citric acid, which is literally safe enough to eat. Citric acid is a natural compound inside of some fruits.
- Zinc Gluconate -- This was chosen for its anti-bacterial and anti-yeast properties (i.e. anti-plague), along with the fact that zinc whitens teeth. The type of zinc that is being used in this product actually improves the flavor. The "gluconate" part comes from the addition of gluconic acid. It is a mild acid that occurs naturally in a variety of foods, including fruits and honey. Some researchers believe it to have nutritional value, but such research is in its infancy.
- Spearmint -- Our spearmint is all natural. This is something that is rare in products. We do not use chemically-extracted spearmint compounds. Our spearmint is literally the powdered leaves of the spearmint plant with no alterations. Due to this, the spearmint used in our formulation releases chlorophyll. This is the extremely beneficial green pigment from plants. While F.D.A. regulations forbid us from making claims about how

our product might benefit sufferers of gingivitis, chlorophyll was effectively used in yesteryear by major companies, such as Colgate, specifically to make toothpastes that cured gingivitis. The F.D.A. cannot stop us from reporting historical events.

- Xylitol -- As an artificial sweetener, this is the only unnatural ingredient of our formulation. Although it could be argued that it originates from natural sugars. It was extensively debated as to whether this ingredient should be chosen over the truly natural sweetener of stevia. We ultimately picked Xylitol for the following reasons. Firstly, it is the absolute best of the artificial sweeteners, and it uniquely has a clean safety record with human use. Secondly, Xylitol is extremely toxic to mouth plaque, without being toxic to the human body. Finally, Xylitol is the only sweetener that is specifically known to strengthen tooth enamel. It seems to have a truly exceptional help-to-harm ratio for a product such as this.

Questions and Answers

What can I expect overall?

The Health Wyze Dental Cleanser has a taste that is very much like that of chewing gum. It feels different, especially for people who have never used a tooth powder before, and the feeling is difficult to describe. The feeling afterward is a combination of a slight numbness with a minty tingle, which can last for hours. We feel as if we have just visited the dentist after having brushed, which is largely caused by the effects of myrrh. The most surprising thing will be the appearance of the spit. As mentioned earlier, the spearmint will release chlorophyll to give the spit a very green appearance. Little kids will love that, but it could be startling to adults during their first brushings. The tooth powder itself has a greenish tint, but the green color is amplified during brushing; due to wetness and the release of chlorophyll. Every individual is different, so we cannot make blanket promises concerning results, but we believe that most people will get better results from this product than whatever else they have been using.

How long will it last me and my family?

We cannot be absolutely certain, because people use differing amounts. The makers of other tooth powders claim that a two-ounce container, such as ours, provides enough product for about 200 brushings. A single container lasts about a month for our four-person family.

What's not to like?

Spearmint particles have a tendency to mat together at the base of a toothbrush's bristles, and these green specks can be observed in a toothbrush that is made from clear plastic. The specks are removable with a toothpick or needle. It is possible that the chlorophyll will stain clothing or other items. Therefore, immediately rinse spillage on clothing and furniture with water to eliminate the staining risk. The product will not stain the teeth green, and it is as safe as regular vegetables in that regard.

What is remineralization?

Dr. Weston Price discovered that most of the things that are taught about dental health are lies. Foremost of these lies is that dental cavities are permanent injuries that require aggressive and invasive interventions with man-made materials. However, early dental cavities will often heal (remineralize) if they are provided with the right nutrition, just like every other kind of wound. It is bad nutrition that causes cavities by stimulating pathogens and a state of acidosis. Our product is intended to act like a mouth supplement to aid remineralization, as well as to promote general cleanliness and health.

My child ate this product, so what should I do?

If the child merely swallowed the amount that is used for brushing, then he would be fine. It would be as if he had taken a strong mineral supplement, with an all-natural antibiotic. If he ate half of a container or more, then keep him near the bathroom. The large amount of zinc would likely cause stomach pain, with a high probability of profuse vomiting. If the child somehow retains a large amount of it without vomiting, then he would be likely to experience diarrhea for a day, because of the high concentration of magnesium. Therefore, eating this product like candy is a mistake that he would make only once. However, there would be no need to get help. Why are there some hard clumps in the powder?

Hard clumps indicate that someone has allowed water droplets to fall into the powder. Mini teeth were essentially created like making cement. It means that the powder worked as it was supposed to, so there is no need for concern. It is usually best to gently fish such chunks out. Water droplets will usually bead on the surface for a short period, so they should be removed using the wicking action of a quality paper towel, in order to prevent clumps from forming.

H.W. Brew (Coffee Substitute)

Price \$14.95

You might feel that this unique brew is just another coffee alternative before tasting it, but you would soon find yourself feeling that coffee is only a cheap substitute for the H.W. Brew. The perfect brew brings an emotional experience that affects all of the senses simultaneously, to bring a moment of bliss in an otherwise hectic world. Our special formulation of natural ingredients is a hint of heaven. The taste has a slightly nutty flavor that reminds some people of hazelnut coffee, and it also has a hint of a vanilla-like flavor that reminds some people of french vanilla coffee. Our brew has a rich blend of popular flavors that unite together stunningly well. It is difficult to describe flavor using mere words, but a description of how it makes people feel is easier.

The feelings produced by this product can make it emotionally addictive, but it is a healthy addiction. It produces the sort of stimulation that is expected from full caffeine coffees, without any of the usual jitters. What is difficult for newcomers to believe about this unique drink is that it is relaxing, whilst it improves the mood and somehow stimulates to a degree that is at least equal to coffee. It is an unheard-of combination that is astounding for most drinkers, after their first cup or two. We do not intend to imply that our brew is decaffeinated, for it does contain some caffeine, as well as other similar mentally-stimulating compounds from the guarana. However, the really impressive effect comes from the kola nut, which was one of the ingredients from the original Coca-Cola drink, from when it contained cocaine. Kola nut was the "Cola" part from the original formula, and it was the secondary mood enhancer after cocaine. It naturally has the same sort of "feel good" and stimulation properties, like an endorphin. So we feel confident that you will become happier when drinking this brew, and we mean it literally. After a cup of the H.W. Brew, we feel serene and yet more alert and better focused. Perfection, in other words.

Ingredients: Chicory root, Ashwagandha, Guarana, Kola nut

Chicory root tastes like coffee when it is sampled alone, so it forms the foundation of the brew. Chicory teas ("coffees") have been used to prevent gallstones, as well as to naturally treat a variety of gallbladder and liver disorders. It contains stimulating compounds that have not yet been isolated. It contains both vitamin C and magnesium. It is widely believed to help with a variety of digestive issues through a prebiotic action.

Kola nut has psychogenic effects and it contains some caffeine. Kola nut extracts are used by the pharmaceutical industry in products that are formulated to suppress nausea and migraine headaches. In Jamaica and Brazil, kola nut is consumed as a sexual stimulant and to treat E.D. It can be chewed before meals to promote better digestion and to enhance taste. It is also used to heal superficial cuts throughout Brazil. Because it increases metabolism in the body while causing appetite suppression, kola nut can also be used as an aid in losing weight.

Ashwagandha has ginseng-like effects, so it is often called "Indian ginseng". It is believed to promote mental clarity and improve memory recall.

Guarana is an all-natural stimulant that contains a substance called guaranine, which is often mistaken for caffeine. Guaranine is safer, and yet it is more potent as a stimulant. Guarana contains large amounts of theophylline, theobromine, and tannic acid. It is rich in saponins, which reduce the risk of cancer and boost the immune system. While the effects of caffeine only last about 3-4 hours, the effects of guarana can last for 8-10 hours. Studies in rats have shown that guarana increases memory retention and physical endurance. Guarana is ideal for dieters, because it somehow releases and uses energy primarily from fat cells. This process is poorly understood, but it has been repeatedly observed and documented. Guarana improves mood, concentration, memory, dissolves extraneous fat cells, and it provides energy for up to 10 hours without jitteriness or side effects. Some studies have cited its anti-oxidant and anti-bacterial effects, and fat cell reduction in mice when it was combined with conjugated linoleic acid (found in real butter).

How to Use and Brew

Only one teaspoon of it is needed for a large mug (11 oz.) of H.W. Brew. Notice this is not a tablespoon. The H.W. brew has a fine consistency, so it should not be made inside a percolator or a French press. It is best brewed with a standard (drip) coffee brewer or inside a teabag. Use a paper filter, in other words. Add cream and sugar as you would with coffee, for the brew was designed to be a drop-in replacement for coffee, and yet be better. The flavor will be as harsh as black coffee if you completely forgo cream and sugar. We realize that some people actually prefer this, but be aware that drinking it straight (black) will exaggerate its different taste to coffee.

Answers to Common Questions

How Much Brew is in a Bag?

Each bag contains 200 grams of brew, which is approximately 95 teaspoons. This means that about 94 cups of brew can be made if level teaspoons are used. Of course, most people will want their brew to be stronger than just the minimal strength, so they will use rounded teaspoons. Most people will use a single heaping teaspoon or 2 teaspoons of the brew powder to make it strong, and this will decrease the amount that can be made to about half. Therefore, most people can expect to get approximately 50 cups of brew from a bag. The number of cups

is more than people get from most bags of commercial coffee when considering the amount that is needed to create a drink of equivalent strength.

What is the Shelf Life?

There may not be an end of life for this product. Unlike coffee, it does not produce carbon dioxide gas or contain volatile organic compounds. The brew is made from dehydrated and powdered herbs, so it could potentially last for many years in its original pristine state. It should be kept in a dry environment to ensure that it is long lasting, and every bag features a convenient zip-lock sealer at the top.

Why Does the H.W. Brew Cost More Than My Coffee?

The question is, does our brew really cost more? Comparatively speaking, we offer much more for much less, and we are not just talking about the taste. When the number of cups that a bag of our product makes is compared with virtually anyone else's, then our brew is shown to be less costly, even though our exceptional ingredients are exceedingly more expensive to procure. Our customers pay only about 25 cents for a cup of our brew. Compare this with Starbucks' coffees to bring reality into perspective. This would actually be a difficult task, because other companies work tirelessly to hide how many cups of coffee that their bagged coffees make, and why their brews always seem to be exhausted quickly. However, we do need to warn you that our brew is likely to disappear fast too. Our brew is remarkably low priced when all things are considered. It is a gourmet brew that is literally handmade by us. It is not some commoditized coffee product that we simply bought in bulk for pennies a truckload, which is what most companies do.

Does the H.W. Brew contain impurities?

We have labored to ensure the purity of this product. The ingredients are purchased only from reputable sellers, and they never come from China. Some ingredients are native to India, however. The main ingredient, chicory, is laboratory tested, and it consistently has a lower heavy metal content than organic vegetables.

What Will You Do When Starbucks' Guys Come for You?

It's okay. We are prepared for them.

Tips for Making the Best H.W. Brew

1. Use cream and sugar as you normally would. You will get the best flavor if you use real dairy cream, instead of milk or a so-called "creamer" product. Due to the preservatives and other terrible additives that are in most U.S. dairy cream, most Americans should alternatively use evaporated milk. It is a considerably safer option at most U.S. locations, and it has similar properties to dairy cream. You may not find absolutely pure evaporated milk either, but the additives are generally much safer.
2. Use real, unbleached, and unadulterated sugar. Our recommendation is a sugar product containing only "evaporated cane juice". Such sugar is stronger, absolutely healthy, and

it is just better in every way, as God made it. This is the premier sugar that our grandparents savored, and therefore it is commonly organic.

3. Try making the H.W. Brew stronger. Instead of using flat teaspoons, use rounded teaspoons, or even double the amount. You will have less of the product, but you might find it so worth the loss for a taste of liquid heaven.
4. Enjoy the H.W. Brew with a friend to spread a little love.
5. For variety, occasionally add a rounded teaspoon of cocoa powder to your brew for a mocha-like delicacy. If you get it right, it will taste better than a regular mocha.
6. It has a different flavor when it is allowed to cool, so try it both ways.
7. Drink it slowly to savor it. We know it will be tough.

H.W. Chocomeal Facial

Price: \$12.15

The H.W. Chocomeal Facial works as well as any facial product on the market, but it does so more simply and more safely. The skincare products that are available in retailers are notoriously toxic, so we have long advised people to avoid them whenever possible. A good face mask should clean the skin, eliminate visible pores, and reduce any inflammation that is present. Therefore, our facial product features oat powder for its well-known anti-inflammatory properties. Oats additionally contain saponins, which are natural cleaning agents.

In addition to providing a delightful aroma, the cocoa powder within our facials also benefits the skin. Chocolate's effects upon the skin have been clinically studied, and it has been found to increase the thickness, hydration, and circulation of blood to the skin. These things make the skin overall healthier; causing it to look more radiant.

We found most of the other products are disappointingly lacking when we perused other options for face masks and facial products. While the terrible chemicals within standard products were expected from the very beginning, we were surprised by the issues of the "natural" products. Foremost, the natural products tend to contain bentonite clay as their base ingredient, which is quite useful for emergency medicine, but bentonite clay contains toxic heavy metals, such as lead. Therefore, it should never be used within routine care or cosmetic products.

Ingredients

- Gluten-free oat flour
- Organic cocoa powder (Chocolate)
- Arrowroot powder

We have endeavored to ensure that our ingredients are of the highest quality. The oat flour is Bob's Red Mill brand, a company whose reputation speaks for itself. The cocoa powder is from Anthony's Goods brand, and it is organic. Anthony's Goods also provides the arrowroot. We made a point to verify that none of the ingredients are ever imported from China. The arrowroot comes for Thailand, the cocoa comes from Brazil or Mexico, and the oats that we use are grown in the United States of America.

Basic Usage Instructions

1. Remove 3 tablespoons of the powder and place it into a small bowl for mixing.
2. Add 2 tablespoons of water to the powder.
3. Mix it thoroughly until it looks like chocolate pudding.
4. Wait about five minutes for the mixture to thicken more, and for the oat compounds to extract. While waiting, wash the face with a gentle soap.
5. Evenly apply a thin layer of the facial to the face, and find a place to relax for at least five minutes.
6. Wash the facial clean in the shower. It does not harm septic tanks.

Will It Make You More Beautiful?

We are certainly betting that it will help, but individual results vary. We have always contended that the truest beauty comes from inside, and that beauty is largely an expression of great health, so the cleansing action of this mask will generally help to beautify the skin. We cannot promise that you'll look like a supermodel or a Greek god afterward, but you just never know.

When Itching Happens

Itching indicates that the facial has been left on for so long that it has begun drying on the face. This is normal for facial products.

For Male Readers Only

This product is great for men too. We specifically designed it not to be sexist. You won't find womanly fragrances like lavender in this facial, or such oily abominations as shea butter. We kept it simple as men want it. This is a "meat and potatoes" facial, so use it and exert your manliness. When you find yourself being approached by more of the ladies in public, just turn to your male buddies and say, "Laugh at my facial now".

Diatomaceous Earth

Price: \$11.50

Diatomaceous earth is the most effective anti-parasitic substance and it is natural. Even the strongest pharmaceuticals cannot match its effectiveness in killing internal parasites system-wide, and the "drugs" (poisons) certainly cannot match its safety. It is a fine, abrasive, white powder (like baking soda) that absorbs large amounts of water. It is comprised of fossilized diatoms, a prehistoric algae. Its unique mineral composition makes it a potent and natural insecticide, but it is relatively harmless to humans and pets. It is believed to kill insects, worms, and internal parasites primarily by dehydrating them. Whenever the powder contacts parasites, its microscopic, razor-sharp edges grate against them and it dehydrates them simultaneously. Our research indicates that it will even kill blood-borne parasites.

Most credible sources estimate that more than 80% of people have parasites, for all that is needed to acquire parasites is a trip to the wrong restaurant. Therefore, we generally recommend a parasite cleanse at least once per year. Diatomaceous earth is the most thorough of the natural options, and its effectiveness vastly surpasses the super-toxic pharmaceutical options, which are prone to causing liver failure (death). This glaring safety issue with the available drugs (eg. death) is one of the reasons why doctors so rarely prescribe antiparasitics, or even admit the possibility of parasites in their patients. It's the "just look the other way" approach to medicine. Doctors typically feel that it is better to just let the parasites live than risk destroying a patient completely with their drugs.

Why Choose Our Brand?

Our diatomaceous earth is procured by the PermaGuard company, which mines it from freshwater diatom deposits. There are 600 diatom deposits throughout the United States, but only 4 of them are considered to be pure enough to produce food grade diatomaceous earth. PermaGuard exclusively uses these four ultra-pure deposits. Diatomaceous earth products for human consumption (food grade) should always be an almost pure white, as is shown in our product picture. Many sellers provide contaminated diatomaceous earth, which is a dark gray or even reddish. Thus, many of the competing products which purport to be "food grade" diatomaceous earth really are not. The color differences indicate that their D.E. powder contains high quantities of impurities, such as toxic heavy metals. Such products should be avoided for use with humans or animals. Our brand of D.E. is *truly* food grade. In laymen's terms, this means that our D.E. is equally effective and considerably safer than those of the other types. One may notice that most of the other D.E. products that are found elsewhere show

no pictures of their powder, and this is a terrible sign. Almost every competing product claims to be "food grade", but it really is like a game of Russian roulette in the market.

Usage Instructions

1. Adults should mix 1 level tablespoon of diatomaceous earth powder with at least 8 ounces of juice, then consume. For children, use 1 teaspoon for every two feet of height.
2. Do this once a day for 7-10 days.
3. Drink plenty of fluids, because diatomaceous earth is dehydrating.

Pet and Animal Usage

Using this natural substance, cats and dogs can be more effectively dewormed, at any age, and without risks. Based on our research, we suggest following a deworming regimen for 10 days. During this time, animals will usually drink more, due to the dehydrating effect of the diatomaceous earth. Please ensure that they are provided with plenty of water. A little common sense and the table to the right should help to provide guidance.

Animal Amount To Use Daily	
Kitten	1/2 teaspoon
Cats	1 teaspoon
Dogs up to 50 lbs.	1-2 teaspoons
Dogs over 50 lbs.	1 Tablespoon
Horses	1/2 - 1 cup

Herxheimer Reactions

As parasites die, they release toxins through their excrement and from rotting. The most common category of parasites, the worm type, attempt to escape by burrowing deeper into the intestines, which can cause sharp cramps. Even when dead, the body is still burdened with the task of flushing them out. This whole process can make a person feel sicker than he was before he began the cleanse, but this is only temporary, and it is a sign that the cleanse is working. It is known as a Herxheimer reaction whenever people become sicker as a result of dying parasites. It usually happens on the third or fourth day. While fatigue and irritability are to be expected, normal life may be continued, and diarrhea should not occur. Eat a good, wholesome diet throughout the cleanse to ensure that your immune system is not overtaxed.

Precautionary Notes

- We advise everyone to buy only *truly* food grade diatomaceous earth for human and animal consumption. The industrial diatomaceous earth that is used for swimming pool filters is chemically treated, and it is not safe to consume.
- Diatomaceous earth always contains *some* heavy metals as part of its mineral content, but it also contains selenium which allows otherwise accumulative heavy metals to be

safely flushed from the body. Therefore, it is not really a health concern, despite the trace presence of aluminum and lead; unless the metal content is excessive as it is in some brands. Nevertheless, we recommend taking selenium supplements for a week after discontinuing this product to ensure that the body neutralizes/flushes leftover metals. Concerned individuals may follow their parasite cleanse with a metal cleanse. Outstanding information about how to perform a thorough metal cleanse can be found in our cleansing article.

- Be sure to drink plenty of fluids, because D.E. will considerably dehydrate a person. If the person or animal does not consume enough fluids while using diatomaceous earth, it can put great stress upon the kidneys, and it can even lead to kidney stones. Drinking homemade lemonade every day would be of great benefit for human patients.
- Diatomaceous earth is not bentonite clay. One should never internally consume bentonite clay for any reason.
- Diatomaceous earth should always be mixed into a fluid or moist food, otherwise it is likely to get accidentally inhaled. Inhalation is harmful to the lungs.
- We cannot promise that this product will successfully work as expected for any particular individual or animal. However, it has an exceptional record.
- It is unwise to use diatomaceous earth (or any other product) as a silica supplement. Silica is not actually a nutrient.
- This product is not for long-term usage. It is not a supplement. Prolonged use of this product risks kidney damage and heavy metal toxicity.

The Essentials Package

Price: \$49.95

This is the Essentials Package. It is being offered for individuals who wish to sample our most popular products. This offer combines shopping convenience with savings over the purchase of these items individually. Customers who order this pack, instead of purchasing the items independently, will save \$14.10 (U.S.D.), which is approximately 22%.

For those who are not interested in our coffee substitute, the H.W. Chocomeal Facial may be chosen instead.

This is a great gift.

Quick Summary of Included Items

Health Wyze Colloidal Copper Lotion combines colloidal copper with other natural and beneficial ingredients for extreme joint and skin rejuvenation.

Health Wyze Antiperspirant utilizes copper instead of aluminum as its active ingredient for a significantly safer product.

Health Wyze Dental Cleanser uses natural ingredients that were formulated together to maximize dental health and to provide the right nutrients for accelerated tooth remineralization.

H.W. Brew is a gourmet coffee substitute which was designed to be beneficial to the health, while actually tasting better than coffees, and providing the same overall stimulation, without the usual coffee jitters. It's a better coffee than coffee, in other words.

Byte Back (Itch Remover) is a roll-on remedy for insect bites. It is surprisingly fast acting, and unlike the overwhelming majority of competing products, this formulation actually works. It is especially effective against mosquito bites.

Byte Back Itch Remover

Price: \$5.95 (Order minimum of 2)

Using therapeutic oils extracted from chamomile flower blooms, this roll-on rapidly stops the itching and burning of most insect bites. It is especially fast and effective in neutralizing mosquito bites. This is not like the products that are found at retail locations, because of its natural ingredients, and the fact that it actually works. A bottle should last most people throughout the warm months. It is ideal for Boy Scouts, Cub Scouts, gardeners, and anyone else who spends a great amount of time in nature. It is packaged inside convenient glass bottles, with a roll-on applicator.

Ingredients:

- Distilled water
- Rubbing alcohol
- Witch hazel
- Chamomile extract

Chamomile blossoms have strong, natural, anti-histamine properties, and alcohol helps to extract the oils that are responsible for this. The alcohol also dissolves the oils on the skin, helping in penetration. Nobody really understands how chamomile works as an antihistamine, but its effect cannot be replicated with modern chemistry. For the greatest strength, the blended chamomile is soaked in an alcohol solution for several weeks prior to bottling.

Did we mention that our stuff actually works?

Defy Your Doctor and Be Healed (book)

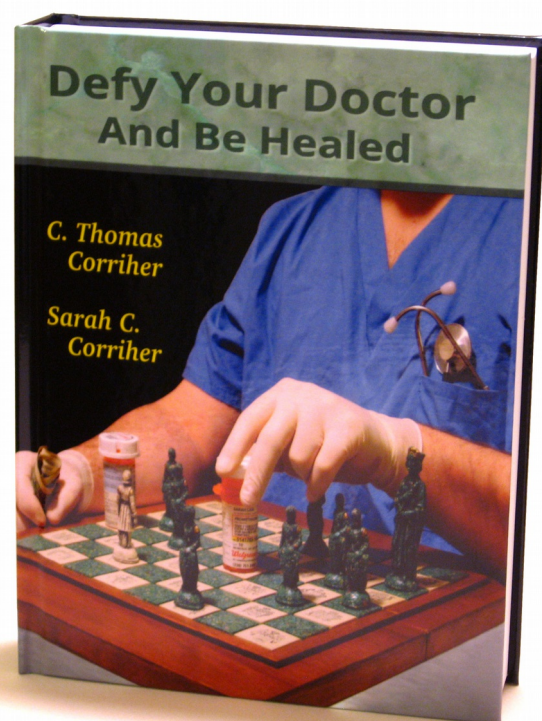

Price: \$22.00 (paperback), \$32.50 (hardback), \$9.95 (e-book @ Amazon)

We have condensed seven years of research concerning all of the things that doctors never tell us, and we teach how to break free of the medical treadmill. Natural alternatives are explained in every chapter, to demonstrate the healing power of God's natural medicines. By discovering how corrupt the system is, our readers will never see things the same way again.

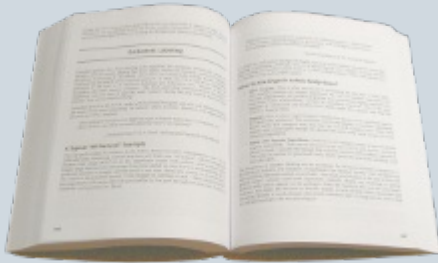

Defy Your Doctor and Be Healed is what other natural cures books were supposed to have been, but weren't. It does not merely list what works and what does not. It explains the hows and whys in a very straightforward manner. Your doctor is not your healer. He is your dealer. This is why diabetes drugs cause full-onset diabetes, cholesterol medications cause sudden-onset heart attacks, and why radiation from cancer screenings causes cancer. The system is designed to be self-perpetuating, and to prevent us from ever being free. There is no money to be made from healthy patients, nor is there profit in having dead patients. The money is made somewhere in the middle, in patients who are alive, but barely.

The medical establishment is one of few industries that remains well respected, because it has cunningly been able to manipulate the public and the media -- much more than any other industry. As one of the hundreds of examples given in the book, cancer patients with no treatment at all statistically live four times longer and have a better quality of life, making virtually any alternative therapy more effective. The mortality census shows that *properly prescribed* medications cause more deaths in the United States every year than any war in its history, and this omits the medical mistakes and the deaths by surgery.

Most of the alternative media promotes frauds, such as "spiritual energy healing", radiation, "urine therapy", or harmful non-food items as "superfoods". We research legitimate alternative therapies, which were standard therapies prior to the early part of the twentieth century, before the medical schools were hijacked by the American Medical Association and the Rockefeller Foundation. One of the reasons why alternative medicine is routinely mocked is because most of what has been presented as alternative medicine is not medicine at all. Instead, it consists of new-age occultism. Much of it dates back to the forbidden religious practices of the ancient Egyptians. Our dedication to the truth and to using the tools that we have been given is one of the reasons why we refer to our healing methodologies as God's medicine.

Quick Facts about Defy Your Doctor and Be Healed

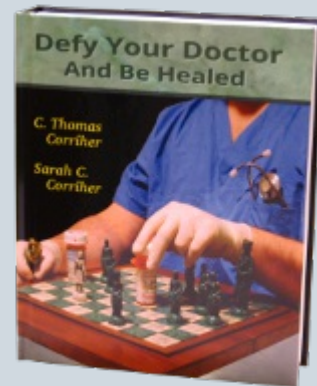

This prolific 609-page encyclopedia is a condensed and revised collection of our best investigations from a seven year period. It is easy on the eyes and nearly impossible to put down. If

you wish to have the best reading experience, then definitely go with one of the paper editions that are available here. The hard-bound version of the book should last forever, and it would be an eye-catching addition to any personal or public library shelf. It features a glossy protective coating, so no messy dust jacket is needed. The softcover version is remarkably durable.

Your Purchasing Options

1. Buy either the paperback or the hardback version from us to get the best price, which would directly support the work of the authors.
2. Buy the [paperback version](#) from Amazon, and you will get a complimentary copy of the e-book (Kindle edition) too. You would also be able to review the book as a "verified purchaser" at Amazon.
3. Buy the [electronic version](#) from Amazon. It is currently free for Amazon customers who have a Kindle Unlimited membership.

How To Order Health Wyze Products

Visit the Store

All Health Wyze products may be ordered online at: <http://healthwyze.org/store/>. The online store accepts payments through all major credit cards, PayPal, and Bitcoin. We made the store fast, private, secure, and pain free. Ordering via the online store provides many benefits, including the Rewards Program, which allows customers to get free items periodically.

Telephone and E-mail Orders

Orders that are paid via a credit card may be made with a telephone call:

1 (877) 378-2260 (U.S. & Canada)
1 (336) 528-4120

A PayPal invoice may be requested by e-mail or a telephone call to enable purchasing through PayPal without using the online store.

To contact us by e-mail, first initiate a conversation using our store's contact form at: <https://healthwyze.org/store/index.php?route=information/contact>

The above link always shows the most updated contact information.

The Fine Print

All prices are in U.S. Dollars, and are subject to change without notice. Prices do not include shipping costs. Sales tax applies to North Carolina orders. Note that H.W. apparel items were omitted from this catalog. You'll have to visit the store to browse those items.

We're Health Wyze. Have you told your friends about us?
